Subject: RE: 2016 SLAB export reports

Thank you for the updated information.

We recognize that occasionally typographical errors can occur with respect to street addresses, etc. which are entered in our database, and it appears that has happened with these sites.

We will consider the SLAB export annual report we received for your 132 Cherry Street location as actually being a 2016 report of exports from your 105 Cherry Street location, and also that your 132 Cherry Street location did not export any SLABs in 2016.

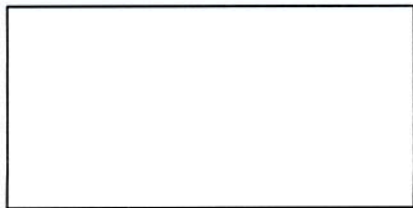

Also, will we consider the SLAB annual report for 303 Bridge Street as instead being for 333 Bridge Street and consider 303 Bridge Street as a data entry error.

The physical address for our Ithaca location is 105 Cherry St. the report you received is for the 105 Cherry St. location. 132 is our New steel location and they do not export any materials

The physical address for our Solvay location is 333 bridge St., the report you received is for the 333 Bridge St, we do not have a location at 303 Bridge St.

Please advise
